## **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment - to clarify the scope of the claims and correct minor informalities to put the application in condition for allowance - was given in a telephone interview with the attorney for applicant, Gary W. Hamilton (Reg. No. 31,834) on June 14, 2006.

The application has been amended as follows:

5. (Currently Amended) A system for synchronizing configuration information in a plurality of data processing devices, comprising:

a node controller;

a plurality of interface agents operably connected to said node controller, said interface agents operating in accordance with the hypertransport (HT) protocol, wherein <u>each of</u> said agents comprises a plurality of configuration registers, including an HT configuration space register and an HT configuration space shadow register; and

a token ring connecting said node controller and said plurality of interface agents;

wherein a transaction from said <u>an</u> interface agents is directed to said node controller and said node controller transmits information to each agent using

said token ring, wherein said information transmitted on said token ring is used by said agents to update said configuration <u>space</u> registers.

17. (Currently Amended) A system for synchronizing configuration information in a plurality of data processing devices using a common system interconnect bus, comprising:

a node controller operably connected to said system interconnect bus, wherein said node controller comprises a configuration block and said transactions are detected by said configuration block;

a plurality of interface agents operably connected to said node controller, said interface agents operating in accordance with the hypertransport (HT) protocol, wherein <u>each of</u> said agents comprises a plurality of configuration registers, including an HT configuration space register and an HT configuration space shadow register; and

a token ring connecting said node controller and said plurality of interface agents, wherein said token ring is connected to said configuration block of said node controller;

wherein a transaction from said an interface agents is directed to said node controller and said node controller:

detects said transaction;

transfers said transaction to said system interconnect bus; and

transmits information to said agents using said to said token ring, wherein said information transmitted on said token ring is used by said agents to update said configuration <u>space</u> registers.
